## Smart Mobility

Utrecht, Heart of Health is the region where we work together towards a healthier, more sustainable future. Here we develop solutions and innovations that help us live healthier physically, mentally and socially, in an environment that contributes to this. In Utrecht Region we work on this ambition in three ecosystems. ROM Utrecht Region builds and supports these ecosystems. We do this by offering networking, investment and internationalisation opportunities to the entrepreneurs involved.

The sustainable, social ambitions for a healthy living environment are the motivation for the Earth Valley ecosystem. Here, companies, knowledge institutions and governments collaborate on innovative solutions for social challenges in the field of sustainably built environment, mobility, climate adaptation and energy transition.

Within Earth Valley, a cluster of mobility companies has developed that is committed to making transport in and around the city more sustainable and at the same time keeping facilities accessible. The innovation ecosystem Smart Mobility in the Utrecht region is therefore characterized by companies and organizations that specialize in solutions for the challenges of urban areas, both for passenger transport and logistics.

This visualization reflects the network and thus the strength and potential of the Utrecht Region. An ecosystem is constantly evolving. Therefore, this visualization is a snapshot of August 2024.

If you want to participate in the ecosystem and/or register your organization, please let us know via [earthvalley@romutrechtregion.nl](mailto:earthvalley@romutrechtregion.nl)
